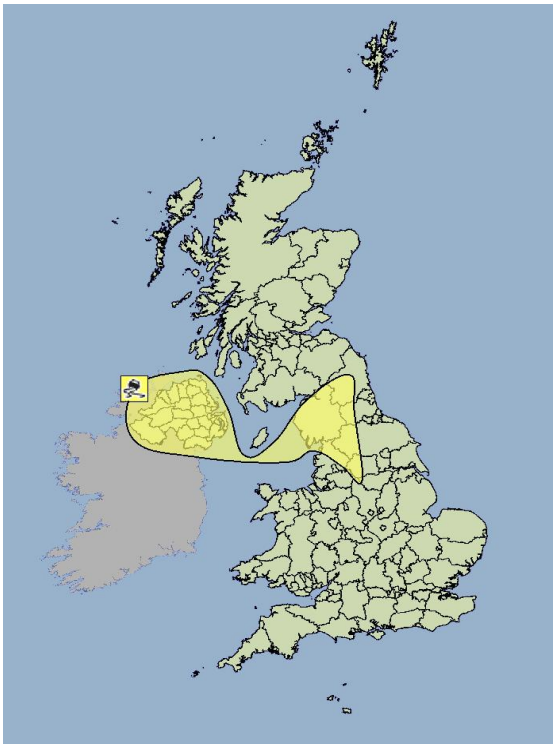
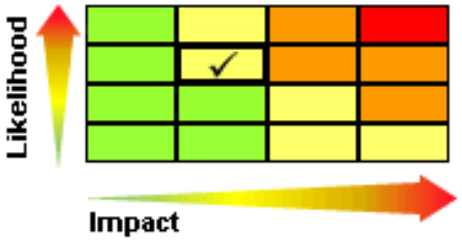
# National Severe Weather Warning Service





**Chief Forecasters Assessment**
A combination of low temperature and surfaces being wet from rain, sleet or snow and a partial thaw of lying snow will lead to icy stretches affecting untreated surfaces. The greatest risk is expected to be in rural areas and higher routes.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **11:00 on Sun, 04th Mar 2018** until **11:00 on Mon, 05th Mar 2018**

Icy stretches will continue to be likely on untreated roads, pavements and cycle paths. In addition, some hill snow is likely at times mainly over the Pennines, although amounts are expected to be small. Driving conditions may become difficult and there is an increased chance of injuries from slips and falls on icy surfaces.
